Summary

Frontend Developer with 2+ years of experience building scalable, data-driven web applications using React.js and Next.js. Specialized in developing complex dashboard systems, dynamic reporting modules, and performance-optimized user interfaces. Strong experience in handling large data flows, reusable component architecture, and integrating APIs in production environments. Proven ability to take ownership of core modules and deliver efficient, maintainable solutions.

SKILLS

Frontend & Frameworks:

React.js, Next.js, Redux Toolkit, Zustand

JavaScript & Core:

JavaScript (ES6+), TypeScript, Async Programming, DOM Manipulation

Architecture & Performance:

Component Architecture, Performance Optimization, Memoization, Lazy Loading, Code Splitting

UI & Styling:

Tailwind CSS, Bootstrap, Responsive Design, Mui

Testing:

Jest, Vitest, Unit Testing

Tools & Technologies:

Git, GitHub, Firebase, Socket.io

PROFESSIONAL EXPERIENCE

Software Developer

LogWinTech Pvt. Ltd.

09/2025 – Present | Surat

Project: Conservice Single Family Activation - Utility Management System

- Developed and scaled multiple core modules including **Locations, Cases & Tasks, and Company Management** using Next.js and modern React patterns
- Optimized large data listing views using memoization, efficient state handling, and rendering strategies, significantly improving performance and user experience
- Built reusable component architecture and shared UI patterns, reducing code duplication and improving maintainability across modules
- Integrated complex REST APIs and handled dynamic data flows, ensuring smooth user interactions and reliable data synchronization
- Wrote and maintained unit tests using **Jest and Vitest** for critical components and business logic, improving code reliability and reducing regression issues

Associate React.js Developer

Instance IT Solutions

11/2023 – 08/2025 | Surat

Project: Bizcompass – Business Process Automation Platform

- Took ownership of **Project Management and Reports modules**, building scalable features and improving workflow efficiency
- Re-architected the **Reports module** to support dynamic report generation and reusable configurations, enabling flexible data visualization and reducing development overhead
- Developed complex, data-heavy reports from scratch, focusing on performance, usability, and scalability
- Implemented advanced task management features including **task tracking, status workflows, and real-time updates**, improving operational visibility
- Built and optimized reusable React components and UI systems, ensuring consistency and faster development cycles across the platform
- Worked extensively with REST APIs, managing large datasets and ensuring efficient data handling in frontend applications

EDUCATION

Bachelor of Technology - BTech, Computer Science

Bhagwan Mahavir University

2020 – 2024 | Surat
